Red Top Resources

Junior Application Developer

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience developing full-stack solutions, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the integration of AI models like Gemini into real-world applications. I am eager to bring this hands-on technical background to the Junior Application Developer role at Red Top Resources.

Beyond my academic foundation in Industrial Engineering and Multiplatform Application Development, I have spent the last few years building and deploying production-ready tools. From creating desktop applications with automated synchronization to managing SQL databases and containerizing environments with Docker, I thrive on solving technical challenges independently. My C1 English proficiency ensures I can collaborate effectively in international teams and navigate complex documentation with ease.

I am particularly drawn to Red Top Resources because of your commitment to innovative software solutions. I am confident that my proactive approach to development and my ability to adapt quickly to new technologies will make me a valuable asset to your engineering team. I would welcome the opportunity to discuss how my technical skills and passion for automation can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can support your team?

Atentamente,

Jorge Jaime Sena
