Bending Spoons

Graduate AI software engineer

Building software that bridges the gap between complex logic and user-centric experiences is what drives me. My journey as a developer has been defined by taking projects from concept to production, such as my recent e-commerce platform for 'El Grano de Oro,' where I integrated Gemini AI to power personalized product recommendations and a virtual assistant. This hands-on experience with LLMs, combined with my background in Industrial Engineering, has sharpened my ability to solve technical challenges with both precision and creativity. Beyond AI integration, I have developed robust desktop applications like 'Music Downloader Pro' and full-stack web solutions, always focusing on clean architecture and efficient deployment using tools like Docker and Git. I am particularly drawn to Bending Spoons because of your commitment to high-impact, scalable software. My technical foundation in JavaScript, Java, and SQL, paired with a C1 English proficiency, allows me to contribute effectively to international teams from day one. I am eager to bring my proactive mindset and passion for AI-driven automation to your engineering team. I would welcome the opportunity to discuss how my background in building production-ready applications aligns with the innovative work being done at Bending Spoons. Are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
