ECS

Junior Developer

Building software that solves real-world problems is what drives me, and I have spent the last few years turning that passion into production-ready applications. My experience ranges from developing full-stack web platforms like 'El Grano de Oro'—which features an AI-powered virtual assistant integrated with Gemini—to creating desktop utilities like Music Downloader Pro. These projects have allowed me to master the full development lifecycle, from database management to intuitive UI design, while constantly refining my skills in JavaScript, Java, and SQL. Beyond my technical background, my studies in Industrial Engineering and Multiplatform Application Development have provided me with a strong analytical foundation. I am highly adaptable, comfortable working in international environments thanks to my C1 English proficiency, and eager to bring my proactive mindset to the team at ECS. I am confident that my hands-on experience with AI integration and automated workflows makes me a strong fit for your Junior Developer role. I would love to discuss how my technical background and passion for building efficient software can contribute to your upcoming projects. Are you available for a brief call next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
