Tripadvisor

Junior Software Engineer

Building software that solves real-world problems is what drives me, and I have been following Tripadvisor's impact on global travel technology with great interest. My background in developing full-stack applications, combined with my hands-on experience in Java and JavaScript, aligns perfectly with the technical challenges your engineering team tackles daily. In my recent projects, such as an AI-powered e-commerce platform, I managed complex data flows using SQL and maintained version control workflows with Git, ensuring that every feature was scalable and production-ready. I thrive in environments where I can bridge the gap between user-facing interfaces and robust backend logic. Beyond my technical skills, my experience integrating AI models into live applications has taught me how to iterate quickly and adapt to evolving requirements—a mindset I am eager to bring to your team. I am confident that my proactive approach to software development and my commitment to clean, efficient code would make me a valuable addition to Tripadvisor. I would welcome the opportunity to discuss how my technical background and passion for building high-quality software can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can support your engineering goals?

Atentamente,

Jorge Jaime Sena
