CGT

Web Developer

Building high-performance web applications is what drives me, and I have spent the last few years turning that passion into production-ready software. My experience with JavaScript, HTML, and CSS has allowed me to develop full-stack solutions, such as my recent e-commerce project for 'El Grano de Oro', where I integrated AI-driven recommendations and automated workflows to enhance user experience. I thrive on solving complex technical challenges and am constantly refining my ability to build clean, responsive interfaces that perform seamlessly across devices. Beyond just writing code, I focus on creating tools that provide real value, whether through custom web platforms or desktop applications. I am eager to bring my technical background and proactive mindset to the Web Developer role at CGT. I am confident that my ability to adapt quickly and my hands-on experience with modern web technologies will allow me to contribute effectively to your team from day one. I would love to discuss how my skills align with your current projects and how I can help drive your development goals forward. Are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
