Satellogic

Jr Software Application Development

Building software that bridges the gap between complex logic and user-centric applications is what drives me. My experience spans from developing full-stack web solutions like 'El Grano de Oro'—where I integrated AI-driven recommendation engines—to creating robust desktop tools like 'Music Downloader Pro'. These projects have sharpened my ability to handle end-to-end development, ensuring that both the database architecture and the frontend interface function seamlessly in production environments. My technical foundation in JavaScript, Java, and SQL, combined with a proactive approach to learning, allows me to adapt quickly to new development stacks and engineering challenges. I am particularly drawn to the innovative work at Satellogic, as I am eager to apply my skills in automation and software architecture to high-impact projects. With a C1 level in English and a background in Industrial Engineering, I thrive in international, collaborative settings where precision and technical problem-solving are paramount. I would welcome the opportunity to discuss how my hands-on experience with AI integration and full-stack development can contribute to your team's success. Are you available for a brief conversation next week to explore how I can add value to your current development initiatives?

Atentamente,

Jorge Jaime Sena
