SPARTA, Inc.

Platform Engineer

I have been following Sparta's growth since your recent Series B funding, and I am genuinely excited by the prospect of contributing to your Platform Engineering team. As a developer who thrives on building robust, automated systems, I am eager to apply my technical background to help streamline the infrastructure and CI/CD workflows that empower your engineering teams to ship faster and more reliably. My experience in full-stack development and my passion for automation align perfectly with your goal of building a self-service platform. I am particularly drawn to the challenge of managing AWS environments through Infrastructure as Code and the transition toward Kubernetes-based workloads. Having built and deployed my own production-ready applications, I understand the importance of developer-focused tooling and the impact of efficient deployment pipelines. I am highly motivated to deepen my expertise in AWS CDK, EKS, and GitHub Actions while supporting the critical infrastructure that drives Sparta's commodity trading platform. I am a fast learner, comfortable with complex problem-solving, and ready to take ownership of the systems that keep your services running at scale. I would welcome the opportunity to discuss how my proactive approach to infrastructure and my technical background can support the Platform Engineering team at Sparta. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
