cleversoft group

Desarrollador Java

Building robust software solutions is what drives me, and I have been closely following the innovative work at cleversoft group. With a strong foundation in Java and a passion for full-stack development, I am eager to contribute to your engineering team by applying my technical skills to your complex financial software ecosystems. My background includes developing production-ready applications, such as e-commerce platforms integrated with AI and desktop utilities, which have sharpened my ability to write clean, maintainable code. Beyond my academic training in Multiplatform Application Development and Industrial Engineering, I thrive on solving real-world problems through independent projects. I am particularly drawn to cleversoft's commitment to high-quality software, and I am confident that my proficiency in Java, combined with my experience in SQL and Docker, will allow me to add immediate value to your ongoing projects. I am a fast learner who enjoys working in international environments, supported by my C1 English proficiency. I would welcome the opportunity to discuss how my technical background and proactive approach align with the goals of your development team. Are you available for a brief conversation next week to explore how I can contribute to your upcoming initiatives?

Atentamente,

Jorge Jaime Sena
