10xengineers

Software Engineer - AI Systems & Frameworks

I have been following the work at 10xEngineers with great interest, particularly your focus on bridging the gap between high-performance hardware and AI inference. As a developer who thrives on building robust software systems, I am eager to contribute to your team's mission of optimizing Vision and Generative AI workloads for next-generation accelerators. My background in both Industrial Engineering and Software Development has provided me with a strong foundation in systems programming, which I have actively applied through personal projects involving performance-critical applications and AI integration. I am particularly drawn to this role because it prioritizes the engineering side of AI—building the frameworks, APIs, and runtime integrations that make models efficient in production. I have experience working with Python and C++, and I am highly motivated to deepen my expertise in pybind11, ONNX Runtime, and GStreamer to build scalable software architectures. My experience deploying AI-powered applications, such as my custom e-commerce platform with integrated LLM assistants, has taught me the importance of clean code, performance profiling, and end-to-end delivery. I am confident that my ability to learn complex systems quickly and my passion for low-level optimization make me a strong fit for your engineering team. I would welcome the opportunity to discuss how my technical skills and proactive approach to problem-solving can support your current projects. Are you available for a brief conversation next week to explore how I can contribute to your upcoming development cycles?

Atentamente,

Jorge Jaime Sena
