Launchmetrics

Full Stack Software Development Engineer React / Node.js

Building scalable, AI-driven applications is what drives me, and the work Launchmetrics is doing to transform brand performance through data and AI is exactly the kind of challenge I am looking for. My experience developing full-stack projects, such as my AI-integrated e-commerce platform, has given me hands-on experience in bridging the gap between complex backend logic and intuitive frontend interfaces using React and Node.js. I am particularly drawn to your pod-based model, as I thrive in environments that prioritize ownership and end-to-end responsibility. In my own projects, I have already navigated the complexities of integrating AI models like Gemini to provide real-time insights, which aligns perfectly with your focus on AI-led features and Media Impact Value. I am eager to bring my technical background in TypeScript, Python, and database management to your engineering team, contributing to the high-performance standards you maintain. I am based in Spain, hold a C1 English certification, and am ready to contribute to your mission immediately. I would welcome the opportunity to discuss how my proactive approach to software development and my passion for clean, maintainable code can support the Discover team's objectives. Thank you for your time and consideration.

Atentamente,

Jorge Jaime Sena
