Affirm

Software Engineer I, Fullstack (Servicing International)

The mission of Affirm to make credit more honest and accessible resonates deeply with my own approach to software development. Having built production-ready applications like 'El Grano de Oro', I understand the importance of creating reliable, user-centric platforms that solve real-world problems. My experience in developing full-stack solutions, from intuitive interfaces to robust backend logic, aligns perfectly with the needs of the Servicing International team.

In my recent projects, I have leveraged React for dynamic front-end experiences and Python for backend integration, including the implementation of AI-driven features. I am particularly drawn to the challenge of building scalable agent tooling and purchase protection systems, as I enjoy the complexity of connecting multiple software components to deliver a seamless user experience. My background in both web and desktop development has taught me how to write clean, maintainable, and well-tested code that stands up to production demands.

I am eager to bring my proactive mindset and technical skills to Affirm's global engineering organization. I thrive in collaborative environments and am comfortable navigating large codebases while contributing to a culture of continuous growth and feedback. I would welcome the opportunity to discuss how my technical background and passion for building global-scale products can contribute to the success of the Servicing International team. Thank you for your time and consideration.

Atentamente,

Jorge Jaime Sena
