PERFIL PROFESIONAL

Software Engineer specialized in AI Systems and Frameworks with a strong foundation in C++ and Python integration. Passionate about performance optimization, low-latency pipelines, and building scalable AI infrastructure. Proficient in bridging high-level AI models with systems-level code using pybind11 and ONNX Runtime.

EXPERIENCIA LABORAL

Software Developer (Independent Projects)

Freelance / Self-Employed | 2022 - Present

- Architected and deployed high-performance AI-integrated applications, reducing user query latency by 35% through optimized model inference pipelines.
- Developed custom automation tools using Python and C++, achieving a 50% reduction in manual data processing time for local business clients.
- Integrated LLM-based chatbots into production environments using ONNX Runtime, ensuring sub-200ms response times for concurrent user requests.

FORMACIÓN

Higher Technician in Multiplatform Application Development

IES El Majuelo | 2025

Bachelor in Industrial Technologies Engineering

Universidad de Sevilla | 2022 - Present

HABILIDADES

Languages:

C++, Python, JavaScript, C, SQL

AI & Frameworks:

PyTorch, TensorFlow, ONNX Runtime, OpenCV, GStreamer

Integration & Systems:

pybind11, SWIG, Docker, Git

Development:

CI/CD, Performance Optimization, Multithreading

PROYECTOS RELEVANTES

AI-Powered E-commerce Platform

Full-stack platform featuring an AI virtual assistant integrated via ONNX, supporting 6 languages and serving real-time product recommendations.

Music Downloader Pro

High-performance desktop utility for media management, utilizing efficient threading and local synchronization protocols for Windows.
